

😊 Resource Tags

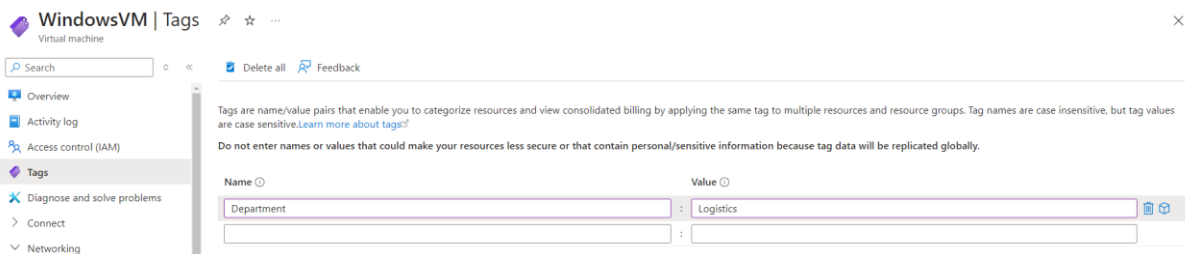

1. In this lab we are going to learn how apply tags to resources.
2. Currently in one our resource group we have a Windows VM.

The screenshot shows the Azure portal interface for a resource group named 'demo-entra-RG'. The left sidebar contains navigation links for Overview, Activity log, Access control (IAM), Tags, Resource visualizer, Events, Settings, Deployments, Security, Deployment stacks, Policies, Properties, Locks, Monitoring, and Insights (preview). The main content area shows the 'Resources' tab with a list of 7 resources. The resources are:

Name	Type	Location
demoentrastorage001	Storage account	North Europe
WindowsVM	Virtual machine	North Europe
WindowsVM-ip	Public IP address	North Europe
WindowsVM-nsg	Network security group	North Europe
WindowsVM-vnet	Virtual network	North Europe
WindowsVM17	Network interface	North Europe
WindowsVM_OsDisk_1_399d7f39d9c144ff85dbc0544bd91f09	Disk	North Europe

3. Now if you onto the VM itself then you will see an option for tags.
4. Below you can see that we just used a tag for our VM.
5. After that just click on the apply button.

The screenshot shows the 'WindowsVM | Tags' page in the Azure portal. The left sidebar contains navigation links for Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Connect, and Networking. The main content area shows the 'Tags' tab with a form to add a new tag. The form has two fields: 'Name' and 'Value'. The 'Name' field is set to 'Department' and the 'Value' field is set to 'Logistics'. Below the form, there is a button labeled 'Apply'.

6. Now one of the benefits of tags is that we can filter them. Go back to your resource group then you can see the option to add filter. Click on it and choose what you want to filter out.

Add filter

Add filter
